ABSTRACT

[0051] An improved canopy assembly for attaching a rearwardly extending protective canopy to a motorized golf cart of the type having a top covering the passenger seating area and an uncovered bag storage area reward of the seating area that includes a golf bag support bracket that prevents the golf bags from tipping over. The canopy assembly includes a base member that attaches directly to the golf bag support bracket, a frame that pivotally attaches to the base member and a sheet of flexible water-resistant material suspended over the frame. The canopy assembly may be extended where the protective canopy substantially covers the cart's golf bag storage area protecting the bags from rainfall. The canopy assembly may be folded wherein the protective canopy is moved out of the way allowing golf clubs to be removed from the golf bags without hitting the canopy assembly.
